

Spring Budget 2021 Pre-Budget Briefings

# **Household debt, gender and Covid-19**

## Household Debt, Gender and Covid-19

*Pre Budget briefing from the UK Women's Budget Group*

### Key points:

- Before the coronavirus pandemic women, especially low-paid, disabled and Black, Asian and ethnic minority women, were more likely than men to be in debt: 61% of those getting into debt to purchase everyday necessities are women.
- Early warnings signs suggest that the lockdowns and inadequate social security system has caused widespread financial hardship, unemployment and debt.
- By the end of 2020, a third of households had reported a fall income, 6 million people had fallen behind on at least one household bill, and 17% of the population had borrowed more or used credit as a result of the coronavirus outbreak.
- Covid-debt is gendered: 30% of women report being negatively affected financially by the pandemic compared with 26% of men.
- Mothers, lone parents, BAME women, young and disabled women are most at risk. For example, in April 2020, a quarter of BAME mothers reported that they were struggling to feed their children and 32% of young women reported finding it hard to pay for essentials.
- The Government must take short-term and long-term action to alleviate poverty and hardship by suspending restriction in the social security system, increasing hardship funding, providing debt relief and, prioritising well-paid secure work.

Before the Covid-19 pandemic, households were spending more and saving less while household debt increases year on year. Household debt<sup>1</sup> levels were at an all-time high.<sup>2</sup> Now, the recession caused by the Covid-19 lockdown and consequent loss of earnings and employment is forcing many people on low incomes into even deeper spirals of debt while those on higher incomes see a saving boost under lockdown.

This briefing unpicks the connections between the economic and social costs of debt in the context of Covid-19, particularly on those from lower-income households, the majority of whom are women.

### Disproportionate impact: pre-pandemic

Household debt is unevenly distributed across income groups, and serves different purposes depending on socio-economic status and need. Household debt is not always negative. It can be positive for wealthier people and families: households on higher and more stable incomes can often borrow more cheaply to fund consumption (e.g. holidays or luxury items) and asset accumulation (e.g. house). By contrast, low-income households and individuals who already face economic hardship may need to borrow for essentials (e.g. food, shelter) and are often also forced to pay the most in interest rates.

Women are more likely to be in debt and they are also over-represented in low-income households:

<sup>1</sup> When it comes to gender-analysis of household debt, there is a tension between the understanding that resources are not shared equally among members of a household and difficulty of measuring debt within households. When it comes to gender equality, it is good

practice to look at individuals *and* households to ascertain what is happening with resources in the household.

<sup>2</sup> Our 2019 Gender and Household debt briefing gives a full outline of why and by how much household debt is growing and, why different groups of women are especially vulnerable to debt.

- In 2018, 1 in 6 individuals in the UK were over-indebted, approximately 8.2 million in total. Compared to the UK as a whole, the over-indebted population is younger and more likely to be female (55%), have children (58%) and live in private-rented accommodation<sup>3</sup>.
- Women are also more likely to incur debt to pay for everyday necessities: 61% of those getting into debt to purchase everyday necessities are women.<sup>4</sup>
- Pre Covid-19, women were more likely to struggle with debt and bills. 39% of women and 34% of men reported it was a struggle to pay bills 'some or most of the time', and 29% of women and 23% of men said they would not be able to make ends meet for a month or less if they lost their main source of income.<sup>5</sup>
- Young people are significantly more likely to be indebted. Notably, the insolvency gender gap was particularly pronounced amongst young people: 25-34-year-old women are over a third more likely to become insolvent than their male counterparts. This is also the age bracket with the highest rate of over-indebtedness.<sup>6</sup>

### Economic abuse and household debt

For some women, debt can also be the cause or consequence of economic abuse in a relationship. Coerced debt is defined as 'debt generated through financial transactions which the victim is told to make (or is aware of the abuser making in their name) in a context where there are negative consequences for non-compliance'.<sup>7</sup> It can have lasting impacts on the ability of victims to rebuild their lives by worsening not just their immediate financial position, but also their credit scores. This, in turn, can make it more difficult for those leaving abusive relationships to rent a home, make purchases on loan, or open certain types of

utility accounts.

### Coronavirus and household debt

The true shape and size of Covid-19 household debt will not become apparent for some time. However, numbers from the first months of the pandemic suggest worrying trends:

- The number of people claiming social security is an early warning sign that people are struggling with financial hardship: figures from March 2020 – February 2021 showed a significant increase in claimants for Universal Credit.<sup>8</sup> **In February 2021, there were around 6 million individuals on universal credit (4.9 million households), double of those at the start of the pandemic (3 million people and 2.6 million households in March 2020).**<sup>9</sup>
- In October 2020, **12 million people in the UK were struggling with bills or loan repayments.**<sup>10</sup> The number of people with low financial resilience has increased by 3.5 million since March 2020, representing an increase of nearly 40%.<sup>11</sup> Some 30% of households expect their financial outlook to worsen in the six months from October 2020.<sup>12</sup>
- By October 2020, 17% of mortgage holders had taken up a payment deferral plan.<sup>13</sup>
- By December 2020, **17% of people reported having to borrow more money or use credit** since the start of the coronavirus outbreak and an increasing proportion – reaching 38.7% - said they would not be able to save for the year ahead.<sup>14</sup>
- The number of households making mortgage, rental and council tax payments was, respectively, 14%, 11% and 9% below what would have been predicted based on pre-crisis trends.
- Since the beginning of the Covid-19

lockdown, **3.8 million people have borrowed to make ends meet**, most often using a credit card (1.7 million), an overdraft (1.6 million) or a high-cost credit product (980,000).<sup>15</sup>

- By the end of July, **a third (34%) of households reported a fall in income as a direct consequence of the pandemic** – that is a total of 9.7 million households across the UK.<sup>16</sup> In January 2021, the Resolution Foundation projected that incomes of those at the 10<sup>th</sup> and 20<sup>th</sup> percentile of the distribution would fall by 10% and 5% respectively.<sup>17</sup>

### Why is coronavirus increasing household debt?

Household debt is impacted by employment, housing and social security policies. While the Government has been quick to act in some areas, there are a number of policy gaps which are driving the increase in household debt.

#### ***Inability to work/earn***

Lockdowns limit people's ability to earn a living, especially for those who cannot work from home or work in sectors with the most severe restrictions. This varies across the UK.<sup>18</sup> In addition, parents and those with caring responsibilities may be forced into debt as they are unable to work due to having children home from school or older/disabled dependents unable to access paid care services.

#### ***Gaps and problems with support***

During the March – June 2020 lockdown, the Government intervened substantially to mitigate the worst economic effects of the pandemic by introducing the Coronavirus Job Retention Scheme (CJRS), the Self Employment Income Support Scheme (SEISS), payment holidays and making tweaks to social security and housing policy. Many of these have now been extended to Spring 2021 to reflect the ongoing nature of the crisis.

In the short term, these have prevented some debt increase although for those on low incomes, living on 80% of earnings could still be cause for debt and the CJRS does not account for overtime, which many rely on. There is also evidence that the absence of a right to furlough due to caring responsibilities, particularly during lockdowns where schools have been shut, has meant that parents, and especially mothers, have had to reduce working hours and seen incomes fall.<sup>19</sup>

Despite the extension of these schemes, unemployment is increasing substantially, especially among young people.<sup>20</sup> Payment holidays, extended in November 2020 until March 2021, will leave many people with accumulated debt and interest to be paid once the moratoria is over.

#### ***Gaps in social security***

More people are claiming social security as a result of the pandemic. This means that more people are having their incomes limited by the severe restrictions in the social security system including the benefits cap, two-child limit, five-week wait for Universal Credit, and the 'no recourse to public funds' condition for migrants.

The rate of Statutory Sick Pay at just £95.85 a week is too low to stop people incurring debt. Over 4 in 10 workers told the TUC that they would have to go into debt or not pay bills if their income dropped down to £96 per week for two weeks.<sup>21</sup>

### Disproportionate impact: coronavirus debt

There are several groups of women at particular risk of indebtedness and poverty:

#### ***Parents and carers***

During the Spring 2020 and January 2021 lockdowns, when schools and childcare was

<sup>15</sup> StepChange (2020) Coronavirus and personal debt: a financial recovery strategy for households (<https://bit.ly/2UtEgPX>)

(<https://bit.ly/2NvwFzW>)

<sup>20</sup> WBG (2020) Response to the Winter Economic Plan (<https://bit.ly/35ht92G>)

<sup>21</sup> Ibid.

closed, women's responsibility for unpaid care increased, with mothers taking on the majority of home-schooling and childcare.<sup>22</sup> With less time for paid work, this is already affecting parents' financial resilience:

- Parents were particularly affected by loss of earnings with **nearly half (47.5%) unable to pay for an unexpected expense** at the end of July. In addition, 44% of parents reported being unable to save for the year ahead at the end of July, up from 33.1% at the beginning of the month.<sup>23</sup>
- **40% of mothers were struggling financially** in November 2020 (35% of fathers).<sup>24</sup>
- Meanwhile, **1 in 4 people with caring responsibilities** surveyed by Citizens Advice in September 2020 **had fallen behind on their bills**. This is particularly pronounced for people caring for someone older, with 1 in 3 (33%) having had to borrow money from a commercial lender.<sup>25</sup>
- Lone parents are especially at risk: mothers in coupled households earned almost twice as much per week than single mothers and nearly half (46%) of single parents worked in routine occupations more affected by the pandemic compared to coupled parents (26%). Single parents are twice as likely to have a zero-hours contract as other family types which puts them at greater risk of job insecurity as a result of the crisis.<sup>26</sup>

### ***Insecure and low-paid workers***

People on low incomes or in insecure, zero hours contracts, part-time and agency work have been particularly vulnerable to debt because they had

fewer savings or assets before the pandemic. Low income, precarity and gender overlap:

- Women are **57% of those on zero-hours contracts and the majority (69%) of low paid workers** so more likely to be in these categories.<sup>27</sup>
- Low-income women were also **less likely to be able to work from home, thereby increasing their risk of contracting the virus and claiming SSP for two weeks while they self-isolate**: only 9% of women in routine and semi-routine jobs were always working from home in June 2020, compared with 44% of women working in professional/managerial roles.<sup>28</sup>

Those on lower incomes are bearing the brunt of the economic impact of the pandemic:

- 41% of people with a personal income of between £10,000 and £20,000 reported that they would be unable to pay an unexpected expense in September 2020, up from 31% in July 2020.<sup>29</sup>
- **44% of those with an income of less than £30,000 have fallen behind or borrowed to make ends meet** compared to 25% of those with an income of £50-60,000. Of those who have fallen behind on essentials, two-thirds (67%) have also borrowed to make ends meet.<sup>30</sup>
- 84% of those working a zero-hours contract, and 71% of those with a temporary contract have been negatively affected compared to 40% of those with a fixed term contract. **30% of women report being negatively affected financially compared to 26% of men.**<sup>31</sup>

### ***Black, Asian and ethnic minority women***

Black, Asian and minority ethnic (BAME) women are also more likely to be in this low-income

<sup>31</sup> Ibid

category due to intersections of structural racism, sexism and discrimination. For example, BAME<sup>32</sup> workers are a third more likely to be in insecure work.<sup>33</sup>

- **1 in 3 (31%) Black people are behind on their bills**, compared to 1 in 8 (12%) white people<sup>34</sup>.
- **BAME women were more worried about being in greater debt than white women** as a result of the coronavirus outbreak: 42.9% of BAME women said they believed they would be in more debt due to lockdown, compared to 37.1% of white women, and 34.2% of white men.<sup>35</sup>
- A similar proportion, 42.9% of BAME women, said they would struggle to make ends meet over the Spring. **A quarter of BAME mothers reported that they were struggling to feed their children (23.7%)**.
- People from a BAME background were **twice as likely as white people to expect to have difficulty paying their usual bills and expenses** in the next three months, and **more than twice as likely to have lost their jobs** or stopped paid working during the crisis.<sup>36</sup>
- **37% of BAME people compared with 31% of the general population have seen their household income decrease** due to Covid-19.<sup>37</sup>

### Young women

Given their overrepresentation in locked down sectors,<sup>38</sup> as well as the impact on schools and universities, young women and men have been one of the groups hardest hit by this economic crisis.<sup>39</sup> Early data estimates that young people are set to increase their debt while job and training opportunities decrease:

- 63% of those negatively affected by the pandemic – in relation to their finances – are between 18 and 49 years old. **18-24-year-olds are nearly twice as likely to have been affected** than those over the age of 65<sup>40</sup>.
- **19% of those aged 25-34 say that they were more likely to seek debt advice** in the next 6 months compared to 2% of those aged 55-64.<sup>41</sup>
- **32% of the young women surveyed said they were finding it hard to afford essentials** like food. Around 1 in 10 said they have taken on debt to manage, such as borrowing from family and friends, taking on overdrafts or paying on credits cards.<sup>42</sup>

### Disabled and shielding women

Disabled people and those required to shield have been particularly vulnerable to loss of earnings, income and Government support. Women are the majority of disabled people as well as those caring for disabled people.<sup>43</sup>

- **Over half (52%) of the 6 million people who have fallen behind on bills are disabled.**<sup>44</sup>
- Disabled people were most likely to say that they will come out of the coronavirus outbreak in more debt. **34.2% of disabled women said their household had already run out of money**, compared to 24.4% of non-disabled women.<sup>45</sup>

### Key workers

Before the pandemic, many of the workers we now see as essential to fighting the virus were undervalued and underpaid, leaving them at higher risk of indebtedness. According to the

<sup>32</sup> \*It is very difficult to access data disaggregated by specific race and ethnicity groups and, data disaggregated by sex/gender and race/ethnicity. Here we use the term BAME whilst simultaneously acknowledging its shortcomings. WBG consistently calls for data to be disaggregated by sex/gender and specific race/ethnicity groups as well as other indices of disadvantage including disability.

<sup>44</sup> Citizens Advice (2020) Excess debt – who has fallen behind on their household bills due to coronavirus? (<https://bit.ly/2lpLZMm>)

<sup>45</sup> WBG, The Fawcett Society, LSE Department of Health Policy and the Queen Mary University of London Mile End institute (2020) Disabled women and Covid-19 – research evidence (<https://bit.ly/3lmgVLB>)

Resolution Foundation, women are twice as likely to be key workers as men,<sup>46</sup> while BAME women and migrant women are also over-represented.<sup>47</sup>

Although their value has been publicly championed, this has not yet translated into adequate remuneration and financial protection leaving many key workers at risk of debt:

- **1 in 5 key workers have fallen behind on their bills**, compared to fewer than 1 in 10 of non-key workers.<sup>48</sup>

These categories are not distinct and, in most cases, intersect in one way or another leaving those with multiple disadvantages at serious risk of financial difficulty and indebtedness. There are other groups particularly vulnerable to Covid-debt including private renters.<sup>49</sup>

### Consequences of debt

Debt may stop people meeting their basic needs.<sup>50</sup> This has ramifications for gender equality since research shows that it is often mothers who go without to feed, clothe, and warm their families.<sup>51</sup> Financial hardship may limit parent's ability to pay for childcare and social care, keeping women especially away from the paid workplace and, limiting their ability to leave abusive contexts.<sup>52</sup>

Household debt also has more far-reaching implications including on mental health and wellbeing: research in England, Scotland and Wales has shown a correlation between mental health disorders and level of personal debt. For both women and men, lower socioeconomic groups have a higher incidence of poor mental health. At every level of income distribution, women have a higher percentage of mental health disorders than men.<sup>53</sup>

---

<sup>46</sup> The Resolution Foundation (2020) Risky business (<https://bit.ly/3n5UYRA>)

Additionally, 39% of working mothers are key workers compared with just 27% of the working population as a whole

<sup>47</sup> For example, BAME women and migrant women are also overrepresented in this work. For example, 1 in 4 care-workers is born outside the UK. 21% of the social care staff and 21% of NHS staff workforce identify as BAME compared with 14% of the UK population. Sources: Skills for care (2019) State of the adult social care sector (<https://bit.ly/38vuGE6>); Gov.uk (2020) NHS workforce (<https://bit.ly/3kgTOAZ>)

## Recommendations:

### Social security

In the short term, the Government should act to prevent further debt and hardship resulting from the coronavirus pandemic by:

- **Providing parents with a right to furlough when schools are closed** to help them (especially mothers) maintain employment.
- **Lifting restrictions on benefits that are untenable during the outbreak:** including the two-child limit and the benefit cap.
- **Making the £20 UC/WTC uplift permanent** and proportional to household size.
- **Enabling claimants to obtain Universal sooner by making advances non-repayable grants.**
- **Increasing Employment and Support Allowance, Jobseeker's Allowance** and other benefit payments in line with the rise in Universal Credit and Working Tax Credits.
- **Increasing Child Benefit to £50 per child** especially while schools are closed.
- **Lifting the 'No Recourse to Public Funds' condition.**

More details about WBG's recommendations for longer term social security reform can be found in our Social Security and Gender briefing.

### Debt relief

- The eviction and bailiff visit ban ought to be extended for the duration of the pandemic to limit the risk of eviction and homelessness.
- The Financial Conduct Authority (FCA) should extend payment holidays for the duration of the pandemic to help people manage household bills.

<sup>48</sup> Citizens Advice (2020) Excess debt – who has fallen behind on their household bills due to coronavirus? (<https://bit.ly/2lpLZMm>)

<sup>49</sup> FCA (2020) FCA highlights continued support for consumers struggling with payments (<https://bit.ly/35jKbNy>)

<sup>50</sup> JRF (2020) Destitution in the UK 2020 (<https://bit.ly/3ba2whT>)

<sup>51</sup> Young Women's Trust (2016) What matters to young mums? (<https://bit.ly/2GVVCVv8>)

<sup>52</sup> WBG (2020) Benefits or barriers: making social security work for survivors of violence and abuse across the UK's four nations (<https://bit.ly/36nP0oh>)

<sup>53</sup> BMA (2018) Health inequalities and women- addressing unmet needs (<https://bit.ly/3lKePG6>)

### Hardship funds:

- The Government should increase the budgets of local authorities to make Local Hardship Funds more widely available.
- StepChange also recommends the introduction of a national hardship fund<sup>54</sup> to provide grants to households negatively affected by coronavirus to repay arrears and debt incurred to pay for essentials. WBG recommends these are delivered on the individual level to maximise economic independence.

### Longer term recommendations

Overall, it is inefficient and counter-productive for the Government to encourage consumer spending yet do very little to ease financial hardship and indebtedness. Much Covid-debt will take years if not decades to pay off, limiting consumers and creditors ability to contribute to the economic recovery from Covid-19.

In the longer term the Government should:

- Consider options for **Covid-related debt write off**. More detailed suggestions on debt relief, including different reliefs for

- different debts are available from Citizens Advice.<sup>55</sup>
- **Prioritise, well-paid and secure work** and increases to the real living wage and living hours guarantees are another key component of reducing household debt and gender inequality.
- **Collect debt data** at the level of the individual and the level of the household and that all individual data is disaggregated by sex, race and disability.
- **Meaningfully and comprehensively assess the equality** of all policies related to debt.

**Written by:** Jenna Norman, Public Affairs Officer, UK Women's Budget Group (updated from November 2020 version). Edited by Eva Neitzert.
